Acting Director of Public Works

BOARD MOTION OF JULY 1, 2008, AGENDA ITEM 69 RESPONSE TO GOVERNOR SCHWARZENEGGER'S STATEWIDE DROUGHT PROCLAMATION

On July 1, 2008, acting on a motion by Supervisor Knabe, your Board adopted nine recommendations directing County departments to take action related to the current drought conditions by focusing on water conservation and recycling.

Two of the recommendations specifically related to increasing the use of recycled water at appropriate County facilities. Specifically, your Board directed the following:

- Development of a recycled, nonpotable water infrastructure plan for County facilities that establishes priorities based upon the amount of potable water saved and including a funding analysis and recommendations.
- Report back in 30 days with a strategy for expanding the use of recycled water at all County parks and other facilities where recycled water maybe effectively used, map the proximity of the County facilities to existing or future sources of recycled water, and develop a cost estimate for connection to and/or creation of the recycled systems.

Due to the fact that these two recommendations are interrelated and together will provide a plan for current and future use of recycled water at County facilities, they are being addressed together. Therefore, the Department of Public Works, Office of Water Recycling, has taken the lead in collaboration with the Chief Executive Office, Department of Parks and Recreation, and Internal Services Department to begin developing a strategy and infrastructure plan for converting all County parks and other feasible facilities to the use of recycled water for nonpotable purposes. A project team comprised of representatives from these County Departments has been formed to

Each Supervisor
July 30, 2008
Page 2

prepare the strategy and infrastructure plan (Recycled Water Plan). The project team held its first meeting on July 21, 2008, and set its next meeting for late August. The project team established protocols for review and approval of the Recycled Water Plan and will begin the planning process at its August meeting.

The Los Angeles County Recycled Water Advisory Committee, which is the local chapter of the WaterReuse Association, prepared a map, using a geographical information system data base, depicting the existing and proposed recycled water pipelines serving the County of Los Angeles. The map is based on information voluntarily provided by each local recycled water purveyor. As a member of both the Los Angeles County Recycled Water Advisory Committee and the WaterReuse Association, the Office of Water Recycling obtained the files containing the data for the map. The Office of Water Recycling performed an analysis of County facilities within one mile of either an existing or proposed recycled water pipeline. Attached are the map and the list of County facilities within one mile of a recycled water pipeline. The listed facilities will be considered first in the development of the Recycled Water Plan. Further analysis of County facilities' proximity to the recycled water pipelines will be performed as part of prioritizing facilities for converting to recycled water.

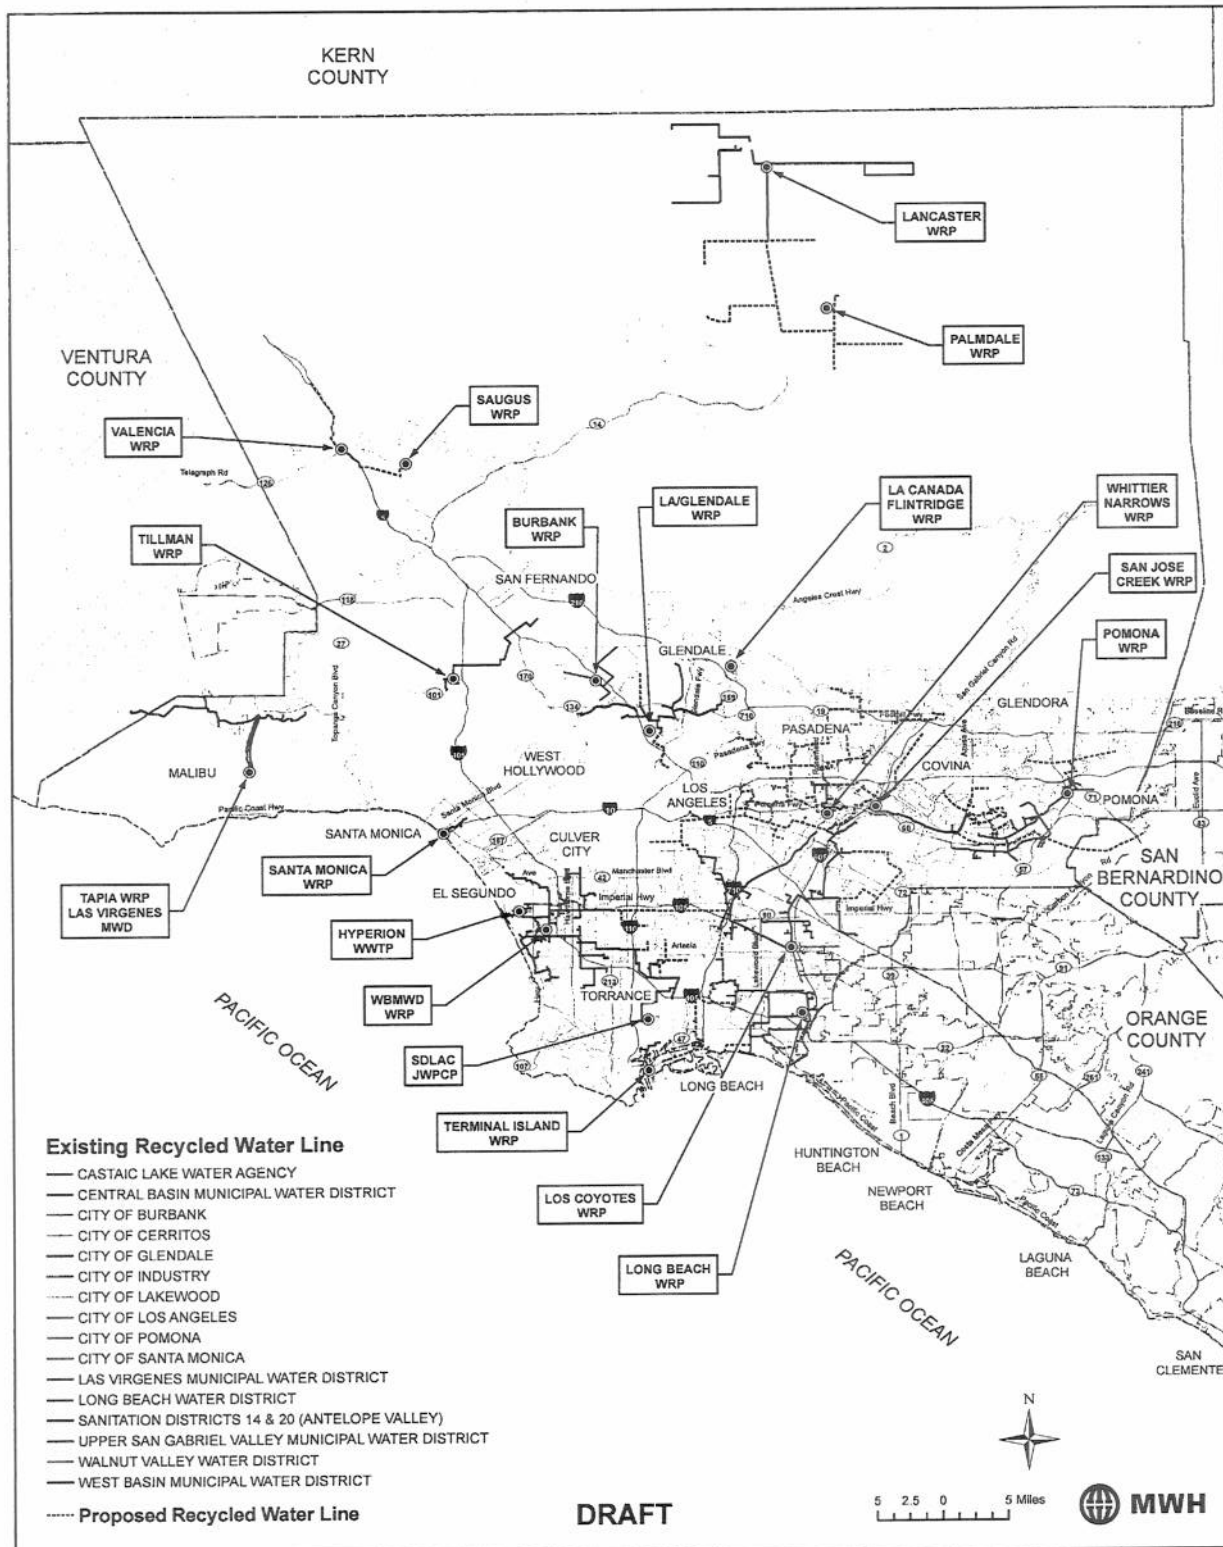

Cost estimates for converting County facilities will also be provided as a part of the Recycled Water Plan. It is our intent to provide your Board with a draft of the Recycled Water Plan within 180 days.

CONSULTATION WITH WATER AGENCIES SERVING THE UNINCORPORATED COUNTY-INTERIM REPORT BOARD MOTION OF JULY 1, 2008, AGENDA ITEM 69

On July 1, 2008, your Board instructed Public Works and Regional Planning to consult with the various water agencies that provide water service to County unincorporated areas and report back in 30 days on how the drought may impact the land development review process for both discretionary and ministerial applications. Your Board also wanted to know what to expect regarding future actions by water agencies on pending development projects in the unincorporated area.

Public Works and Regional Planning have collaborated on the necessary research and activities to respond to your request. On July 16, 2008, the attached letter and questionnaire was sent to 46 retail water agencies initially identified as serving County unincorporated areas.

Over the next two weeks, we will conduct additional research to identify any additional water agencies, send out additional questionnaires if necessary, follow up with phone calls to the water agencies to improve the response rate on the questionnaires, and submit a final report to your Board on September 2, 2008.

If you have any questions, please contact me, or your staff may call Fred Rubin, Acting Deputy Director, at (626) 458-4018.

DROUGHT IMPACT QUESTIONNAIRE

1. Do you plan to continue issuing Will Serve letters for pending discretionary development projects (subdivisions, conditional use permits)? ☐ Yes ☐ No

Comments: _____

2. Do you plan to continue issuing new water service connections to ministerial development projects (building permits on existing legal lots)? ☐ Yes ☐ No

Comments: _____

3. Do you expect to impose new fees for new water supplies or improved water supply reliability? ☐ Yes ☐ No

Comments: _____

4. Do you plan to revise your previously approved water supply assessments, environmental documents, and/or urban water management plan? ☐ Yes ☐ No

Comments: _____

5. Do you plan to impose requirements for new developments to utilize recycled water and/or implement additional water conservation measures? ☐ Yes ☐ No

Comments: _____

GOVERNOR'S STATEWIDE DROUGHT PROCLAMATION

On June 4, 2008, Governor Schwarzenegger proclaimed the first Statewide drought in 16 years because water supplies in California have been significantly depleted due to dry weather conditions. Demands and pressure on our imported water supply continue to mount. Recent court decisions have affected water exports from the Sacramento-San Joaquin Delta because of operational impacts on certain fish populations.

As a result of this proclamation, the County of Los Angeles Board of Supervisors have requested that we consult with the various water agencies that provide water service to the County unincorporated areas and report back on how the drought may impact the land development review process for both discretionary (subdivisions, conditional use permits, zone changes) and ministerial (building permits) applications. In order to be responsive to our Board, we would like to know what we can expect from your agency in regards to requests for water service for new development planned within your service area.

Please answer the enclosed one page questionnaire and respond by fax, e-mail, or postal service by **August 1, 2008**, to :

Acting Director of Public Works

BOARD MOTION OF JULY 1, 2008--AGENDA ITEM 69 CONSULTATION WITH WATER AGENCIES SERVING THE UNINCORPORATED COUNTY--REQUEST FOR EXTENSION

In the Board's motion of July 1, 2008, Public Works and Regional Planning were directed to consult with the various water agencies that provide water service to County unincorporated areas and report back in 30 days on how the drought may impact the land development review process for both discretionary and ministerial applications. Your Board also wanted to know what to expect regarding future actions by water agencies on pending development projects in the unincorporated area.

Public Works and Regional Planning are respectfully requesting an extension to October 14, 2008, in order to complete the collection of information from the water agencies and to provide staff with adequate time to fully analyze the information and determine the drought's impact on the County's land development review policies and procedures.

RECYCLED WATER CONVERTING COUNTY FACILITIES

On July 1, 2008, your Board instructed the Department of Public Works, working with the Chief Executive Office (CEO), the Department of Parks and Recreation (DPR), and the Internal Services Department (ISD), to provide a report with recommendations for actions the County could take in response to the Governor's declaration of drought in California. Public Works submitted the report on July 30, 2008, and indicated it would provide additional information within 180 days on your Board's request for a strategy for converting County facilities to recycled water. A committee, comprised of representatives from the Office of Water Recycling, DPR, ISD, and the CEO, have completed the attached report prioritizing County facilities for conversion to recycled water, estimating the costs for these conversions (based on current construction costs), and recommending a strategy for completing the conversions. The estimated costs to the County reflect the anticipated contributions from other agencies, such as the Metropolitan Water District, for completing the conversions.

The committee sorted County facilities into three priority groups based on the facilities' proximity to existing recycled water mains and projections for potable water savings and cost-efficiency.

Priority One facilities are comprised of DPR park facilities located adjacent to or within 1 mile from a recycled water pipeline and which could be converted immediately and DPR golf facilities that have contractual and/or cost prohibitive issues to be resolved prior to conversion. The cost estimates based on preliminary plans for constructing 2.55 miles or 13,464 feet of pipeline to irrigate 2,229 acres of landscaping at Priority One facilities is \$6 million to \$7.2 million. These conversions would allow 848 acre feet of potable water currently used at these facilities to be reallocated to truly potable needs.

FILED
2009 FEB 11 PM 12:52
BOARD OF SUPERVISORS
COUNTY OF LOS ANGELES

Priority Two facilities include DPR facilities within 1 mile of recycled water pipelines and other County facilities within 1 mile of a recycled water pipeline. The total estimated cost for constructing 34,800 feet of pipeline and the necessary irrigation system upgrades is \$14.8 million to \$17.8 million based on the amount of irrigated acreage at each facility. These conversions would allow 366 acre feet of potable water currently used at these facilities to be reallocated to truly potable needs.

Priority Three facilities are comprised of all DPR facilities not included in Priority One or Two and all other County facilities within 1 mile of a recycled water pipeline not included in Priority Two. The total estimated cost for constructing more than 408,000 feet of pipeline to irrigate 1,139 acres of landscaping and to supply other nonpotable uses at Priority Three facilities is \$78.5 million to \$94.2 million. These modifications would allow 1,977 acre feet of potable water currently used at these facilities to be reallocated to truly potable needs.

The committee recommends that the CEO, ISD, DPR, and Public Works identify and pursue funding, including grants and future bonds, Federal or State economic stimulus programs, and local matching funds for converting all County facilities to recycled water, and report back to your Board with funding recommendations in conjunction with the Fiscal Year 2009-10 Proposed Budget.

This strategy will ensure that all County facilities contained in the Priority One, Two, and Three groups will be converted to recycled water prior to 2030, which will assist the County in meeting the goal established by your Board of doubling recycled water use within the County by 2030. This strategy, once fully implemented, will also result in ongoing savings in groundwater and imported supplies.

Attachment A is a table specifying the County facilities contained in each Priority category. Attachment B is a description of the process used by the committee to develop the Priority categories and the cost estimates for the conversions.

PRIORITIZING FACILITIES

Since its inception on July 1, 2007, the Office of Water Recycling (OWR) has been working with the Department of Parks and Recreation (DPR) to determine the feasibility of converting County golf courses and parks currently irrigated with potable water to irrigating with recycled water. As a result of the current drought, DPR broadened their efforts in February of 2008 to include assessing the feasibility of converting irrigation systems at parks and golf courses within a 2-mile radius of an existing recycled water pipeline to recycled water. The OWR had likewise contacted the Energy and Environment Team within the Internal Services Department (ISD) to explore converting all County facilities to recycled water where feasible.

Following submittal of the July 30, 2008, report to the Board, OWR established monthly meetings of a committee comprised of representatives of the OWR, the Chief Executive Office (CEO), DPR, and ISD. These meetings were held to coordinate efforts among the entities, to establish criteria for selecting facilities to be considered for conversion, to identify criteria to prioritize candidate facilities for conversion, and to establish consistent cost estimating procedures to determine the costs of the conversions. Principles were agreed upon at these meetings and then the representatives would apply them to the facilities under their respective control.

The water purveyors have indicated that recycled water is available to be served to all County facilities. The two most important criteria for selecting a facility to be converted to recycled water for nonpotable uses are the facility's proximity to a recycled water pipeline and the amount of water used at the facility for nonpotable uses, such as irrigation or cooling water. The WaterReuse Association provided the OWR with a geographical information system (GIS) file containing the recycled water pipeline systems serving Los Angeles County. This file was then combined with a GIS file containing all County facilities. This provided the committee with the ability to list all County facilities within a specified distance from a recycled water pipeline.

The committee reviewed water usage information for County facilities. Major users include parks, golf courses, hospitals, and correctional facilities. Combining the water usage information with the list of facilities near a recycled water pipeline resulted in a list of facilities best suited for conversion to recycled water. The committee then separated County facilities into the three priority categories. Some facilities that are excellent candidates for immediate conversion and were included in the Priority One list have an outstanding issue that must be addressed first. The two most common issues encountered are lessees at County-owned golf courses insisting that the construction activity required for the conversion take place after their lease has expired. The other issue to be resolved is that some facilities use groundwater that is less expensive than recycled water and there is no market for leasing the groundwater rights.

COST ESTIMATES

There are several components to the cost estimates for converting County facilities. These components include the cost of the water itself; design and construction of service laterals from existing recycled water pipelines to a facility; converting the on-site plumbing at the facility to allow use of recycled water for irrigation at the facility; and additional treatment of recycled water when used for cooling towers, which includes one-time capital costs and annual ongoing costs for the treatment process.

Cost of Recycled Water

The cost of recycled water is less expensive than potable water purchased from water purveyors. Some County facilities use groundwater pumped and delivered by the County, which is less expensive than purchased recycled water.

However, where there is an active market for groundwater rights, such as in the Central Basin, County groundwater rights can be leased at rates higher than recycled water rates. The revenue from the groundwater leases would not only pay for purchasing recycled water but would provide additional revenue to the County.

Cost of Connecting Facilities to Recycled Water Mains

Design and construction of new service laterals is often paid by the purveyor that owns the pipeline. In some instances, this cost is shared by the customer in order to ensure and expedite the availability of recycled water.

Cost of Converting Facility Plumbing

On-site plumbing modifications necessary for using the recycled water are typically paid solely by the customer.

There are several grant programs currently available to help defray the cost of recycled water conversions. The Metropolitan Water District (MWD) is currently providing \$500 per acre-foot of potable water replaced by any recycled water conversion. This program specifically targets government-owned facilities. Several State grant programs also provide funds for converting facilities to use recycled water. Unlike the current MWD grant program, the State-sponsored programs are all competitive grant programs.

The DPR has been working on a plan to convert its facilities to recycled water wherever feasible. They have developed draft plans for several of their facilities and have been meeting with recycled water purveyors to determine the feasibility of converting these facilities.

In several instances, negotiations between DPR and the water purveyors have progressed to the point where preliminary planning level cost estimates have been developed for converting park irrigation systems, including determining the eligibility for an MWD grant and the likely cost share between the purveyor and DPR. These initial cost estimates are the basis for cost estimates to convert irrigation systems at all County facilities. Based on the above-mentioned instances where DPR has estimated facility conversion costs, the total cost of the conversion for each facility was reduced to a unit cost per acre of irrigated area. The average of these unit costs was used to estimate the conversion cost for other facilities converted to recycled water for irrigation.

Water quality is especially important for the water used in cooling towers. Recycled water often must be further processed before it can be used for this purpose. Typical salt and nutrient levels in recycled water can create maintenance problems when used in cooling towers. OWR provided ISD with water quality data typical of recycled water. ISD determined that additional processing would need to take place at the Rancho Los Amigos complex in order to utilize recycled water in that facility's cooling towers. ISD estimated the additional cost to be \$20,000 in capital expenses and an additional \$15,000 in annual costs. Each facility with a cooling tower to be converted will be evaluated separately to determine whether additional treatment would be needed based on the specific water quality parameters provided by the recycled water purveyor serving the facility. Cost estimates for any additional treatment will be developed and considered prior to converting the facility. These facilities have not been included in the priority list.
